

## PROCESS HIGHLIGHTS

- Automated routing of entire pellet line
- Patented Repete algorithm optimizes pelleting runs
- Commodity & equipment interlocking
- Automated run routing & scheduling
- Simple & intuitive graphical interface
- Independent Computer Assisted Manual (CAM) control for all equipment
- One-click recovery
- Visual & audible alarms

## PELLETING PERFECTION

**FLX Pelleting Automation** brings the power of our patented Optimizing Pellet Mill Controller to control the entire pelleting process seamlessly. Runs are organized on the pelleting schedule to manage production in advance. Pelleting parameters may be adjusted on the fly during an automatic run.

**FLX Pelleting Automation** includes automated routing of the entire pellet line, from mash bins to destination pellet bins, with equipment interlocking to handle plug situations and equipment failures. It also offers one-click recovery. This gives users the ability to one-click recover from a plug or downstream routing situation, saving time and increasing overall production. In addition, **FLX Pelleting Automation** supports Computer Assisted Manual (CAM) control to control process equipment when managing exceptions.
