FRIENDLY INTERFACE

FLX Batching Automation provides a well-designed, friendly graphical interface in both CAM and automatic modes. Clear, consistent buttons in **Batching Automation** offer easy access to all system functions.

A comprehensive, on-board Help System addresses most common issues. When equipment malfunctions, the FLX has both visual and audible alarms. Data can be automatically archived and backed-up.

FLEXIBILITY

FLX Batching Automation is the most open, configurable system available for batching applications. It allows multiple levels of control from Computer Assisted Manual (CAM) to full auto modes. **Batching Automation** lets the user configure parameters to perfectly match their system and requirements. The modular, expandable FLX control can add other process areas as needed. Integrated data storage and retrieval for audits is standard, for product reconciliation and traceability.
