

THE ULTIMATE IN SUPPORT AND TECHNOLOGY, AT YOUR SERVICE.

At Repete, we design and deliver automated control system solutions world-wide. Then we support them unconditionally.

Our unique systems range from dedicated, process-specific controls to plant-wide automation for animal nutrition, agri-business and the food industry. There are more than 1,000 Repete systems operating across the world right now, producing millions of tons of product every hour.

A WELL-OUTFITTED TEAM.

It's 10 a.m. and you call us. It's 2 a.m. and you call us. A Repete support person, located in your area of the world, will answer.

Everyone on our support team will be informed of your situation. If you need to call back, the person you speak with will be up to speed on your issue. You'll experience highly consistent, process-oriented support.

We aren't perfect. If you're not satisfied with the way a call is going, let us know. Ask to speak with a different support person, even a programmer if necessary. If that doesn't resolve your issue, please call our CEO Wade Leverett at **(262) 314-4225**.

UNCOMMON RESEARCH, EXCEPTIONAL TECHNOLOGY.

Research fuels our ability to provide you with cutting-edge, unique software systems. To our knowledge, nobody matches our investment in research or the way we go about it.

We're driven to identify the highest levels of plant automation that produce the lowest risk. We're experts on plant automation patterns, and we invest in research to turn those patterns into affordable software systems.

Our teams meet every day to discuss ways we can reduce your risks while optimizing your operation. As a result, Repete systems are ever-more intelligent and capable of full-mill automation.
